Investment objective

Vanguard LifeStrategy Growth Fund seeks to provide capital appreciation and some current income.

Investment strategy

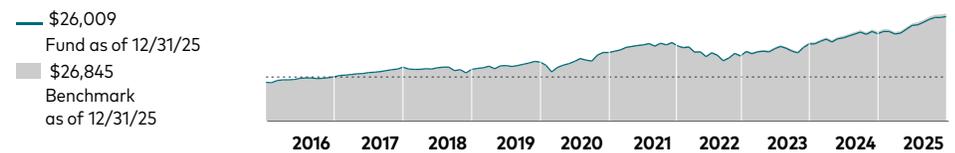

The fund invests in other Vanguard mutual funds according to a fixed formula that reflects an allocation of approximately 80% of the fund's assets to common stocks and 20% to bonds. The targeted percentage of the fund's assets allocated to each of the underlying funds is: Vanguard Total Stock Market Index Fund 48%, Vanguard Total International Stock Index Fund 32%, Vanguard Total Bond Market II Index Fund 14%, and Vanguard Total International Bond Index Fund/Vanguard Total International Bond II Index Fund 6%.

The fund's indirect stock holdings are a diversified mix of U.S. and foreign large-, mid-, and small-capitalization stocks. The fund's indirect bond holdings are a diversified mix of short-, intermediate-, and long-term U.S. government, U.S. agency, and investment-grade U.S. corporate bonds; mortgage-backed and asset-backed securities; and government, agency, corporate, and securitized investment-grade foreign bonds issued in currencies other than the U.S. dollar (but hedged by Vanguard to minimize currency exposures).

The performance data shown represent past performance, which is not a guarantee of future results. Investment returns and principal value will fluctuate, so investors' shares, when sold, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data cited. For performance data current to the most recent month-end, visit our website at vanguard.com/performance. The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index.

Figures for periods of less than one year are cumulative returns. All other figures represent average annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. All returns are net of expenses.

Plain talk about risk

The fund is subject to several stock and bond market risks, any of which could cause an investor to lose money. However, based on the fund's current allocation between stocks and the less volatile asset class of bonds, the fund's overall level of risk should be higher than those funds that invest the majority of their assets in bonds, but lower than those investing entirely in stocks. Because the fund invests substantially all of its assets in underlying funds, it is subject to underlying fund risk. This means that the fund is exposed to all of the risks associated with the investment strategies and policies of the underlying funds, including the risk that the underlying funds will not meet their investment objectives. In addition to the risks inherent in the asset classes of the underlying funds, the fund also is subject to asset allocation risk, which is the chance that the selection of underlying funds and the allocation of fund assets will cause the fund to underperform other funds with a similar investment objective. For further details on all risks, please refer to the fund's prospectus.
